Concerts

Culture Garden
9 PM - Inner Solis concert

Lots of potentiometers, flashing LEDs, monitors ... – when looking at the stage, you wonder whether what you see are musical instruments or one of the satellite control units of NASA installed on stage. Although the formation only has two members, their concerts are characterized by brilliantly executed solutions. Lajos Sebestyén Szabó and Alex Popov have been working together for three years now. Dynamic music and attractive visual effects jointly fly the audience to the borders of science and art.
